Why choose this topic

Personal Diary:

General conclusion of this meeting

1. Every team member wrote down their thoughts in green label of a generic topic we want to do - a diary app. Why? It is generic and we can add many features in it as we see fit.
2. Decide what kind of diary app are we making - a food diary app. Why? It seems most of the team members love this idea.
3. Who is our users - a people would like to record the food they made and the restaurant they went to. Which gives us a basic thought that our app have two categories: food you made and restaurant you go. Most likely these two categories allow people to upload picture of they eat, write some text, and rate it.
4. What are we gonna do next? Everybody can contribute their ideas about what features should we have, how we do it, etc and post their thoughts on the Slack. Team leads and designer will consider all the suggestions and make some choice of what we gonna do and why we are going to do that. We plan to get all the design stuff done by the next meeting.

Who is the user

College students

Anybody interested something and want to how this thing happened in their daily life.

What makes our App different

Primary features (that is essential for the app)

Why people need such an app?
